

UNCERTAINTY.

Take the edge off it.

- › **Uncertainty.** You don't like it because it obscures your vision for the future. Yet uncertainty is the order of the day in radiology.

Just consider: government is poised to impose further limitations on how much imaging you can perform and under what circumstances, while private payors are contemplating putting up extra hoops and hurdles to further complicate the reimbursement process. On top of that, the economy continues to struggle, in some parts of the country the radiologist shortage shows no sign of abating, and capital resources are stretched to the limit. Uncertainty is everywhere you look.

One thing that *is* certain, though: all this uncertainty is impairing your ability to meet the demands of referring physicians, their patients and your other customers or partners.

Despite that, you do have an advantage against uncertainty. **Imaging On Call.** We bring into sharp view the advanced diagnostic imaging solutions you need to make your path forward clearly visible, your footing sure, and your progress certain.

 **IMAGING
ON CALL** A division of 
See things differently.

WE HELP YOU EXCEED

expectations around-the-clock with premier teleradiology services and radiology department support.

- › **Save time and resources on staff supplementation.** We step in to help you recruit and vet the extra radiologists you need on site as well as appropriately augment the staff required at your facilities. This is key to your ability to provide the level of diagnostic interpretation expertise your medical staff and referring providers expect as they strive to achieve the highest standards in patient care.

- › **Deliver higher quality care.** To do that, you first need the ability to quickly yet thoroughly read images from all types of modalities involving all manner of studies, which means you must have extensive sub-specialty expertise. The sub-specialist network we bring to you consists of over 400 board-certified and Joint Commission-accredited radiologists from every field of diagnostic and interventional imaging. They work hand-in-glove with our select team of 40-plus fellowship-trained, board-certified teleradiologists to cover you day and night for sub-specialty readings – as well as for readings involving emergent, routine and overflow studies.

➤ **Expand into new service lines without expanding your radiologist staff.** Our financial expertise helps you procure new modalities and enlarge your facilities. No need to hire more radiologists since our teleradiology and sub-specialty networks provide that expertise for you.

➤ **Lower your costs.** We reduce your need to make capital investments in hardware and software. Our services are delivered to you through our economical yet full-function, web-based PACS system. With it, you'll be able to consolidate all your DICOM- and HL7-compliant images and reports into a centrally managed work list and at last experience the benefits of high-availability information.

➤ **Lighten the load on your staff.** We offer departmental administrative support to handle many of your most time-consuming and labor intensive clerical tasks – except that our powerful efficiencies of scale allow us to do it for a fraction of what your non-physician personnel have likely been costing you.

➤ **A name you trust.** Imaging On Call is a division of RadNet, Inc., an outpatient diagnostic-imaging facilities owner/operator that started in 1980 and is currently responsible for more than 200 centers across the nation. At Imaging On Call, we've been serving radiology departments like yours since 2002.
